

Yan Oi Tong Chan Cheng Yuk Yee Kindergarten

School Year: 2024/25

Grade: K2

Activity Name: "Tree Doctor Guided Tour"

Activity Objectives:

1. Learn about common urban trees in Hong Kong and observe their growth.
2. Understand the uses and value of trees, and learn to cherish them.

Activity Overview and Record:

Children investigated the growth of trees using their senses under the guidance of teachers and activity instructors. The activity content included smelling the leaves, feeling the roughness of the bark, hearing the sound of water moving inside the trunks, and visually studying lichens and growth rings on tree trunks. Additionally, they made a meticulous effort to "diagnose" a tree. In order to comprehend the growth of tree trunks, parents and children also worked together to measure the trunks' width and height using a tape measure. Last but not least, parents and children gathered various leaves and made original butterfly crafts, highlighting the importance of protecting the environment.
